VITAL STATISTICS

St Louis Copy changed 9/22/48

Bureau of Vital Statistics
Municipal Courts Building
St. Louis 1, Missouri

Gentlemen:

We should like to change the cause of death on the certificate of Fred Heinberger who died on September 1st, to the following:

Immediate cause of death: Multiple thrombi in pulmonary arteries with occlusion, 5 weeks
Secondary to: Arteriosclerotic heart disease, many years duration
Partially healed burns of right axilla and back, 2 months

The above change is made in accordance with the findings at autopsy. Report of findings is given below:

Primary
Partially healed burns of the right axilla and back (History of accidental burns 2 months)
Multiple thrombi in the pulmonary arteries with complete occlusion of the right major pulmonary artery
Recent infarct in the upper lobe of right lung
Serofibrinous pleurisy, left (500 c.c.)
Petechise in the mucosa of the stomach, jejunum and ileum
Congestion of the mucosa of the urinary bladder
Fatty metamorphosis of the liver, slight

Accessory
Arteriosclerosis of the aorta, coronary, renal and splenic arteries, advanced
Sclerosis of the bases of the cusps of the aortic valve and anterior leaflet of the mitral valve
Arteriolar nephrosclerosis, moderate
Chronic pyelonephritis, left, advanced
Hypertrophy and dilatation of the heart (475 gm.)
Fat infiltration of the myocardium
Double ostium of right coronary artery
Calcified nodule in the lower lobe of the left lung
Calcified nodules in the bronchopulmonary lymph nodes, left
Calcified nodules in the spleen
Hyalization of the capsule of the spleen
Hemangioma in the liver
Simple cyst in the liver
Nodular hyperplasia of the prostate

We previously reported this as arteriosclerotic heart disease of many years duration because it was the impression of our medical staff and consultants that the illness responsible for death was entirely disconnected with the burn received two months previously. Naturally, this was a matter of medical judgment, and for that reason we feel that our actions in this matter have been correct.

F. R. BRADLEY, M. D.
DIRECTOR

We were informed that the autopsy revealed arteriosclerotic heart disease. However, subsequent histological studies revealed the thrombi of the pulmonary arteries.

Very truly yours,

FR Bradley
