In the foregoing statistics care has been taken to obtain as nearly as possible the actual statistics. However some of the blanks can only be filled by estimate as for instance Butter. It is impossible to get reliable information in this regard an estimate however of what could be made is easily arrived at taking the number of milk cows and from the way lbs a cow could produce easily arrive at the estimate. So also with the wood (forest products) only a few persons could answer with any degree of accuracy. Enough has been learned to give us an estimate of \$300000 each family on average, town and country taken together. And this estimate will be as accurately answer for my dist. perhaps as could otherwise be obtained. The Enumerator is not certain that more estimates will answer to his duties under the law or that estimates are statistics otherwise. The Population Schedule might be filled by merely credit the females (adult) and from the capabilities or possibilities in the premises deduce the material information necessary to account of the population (?). Among some German families some of the less farm products
