Remarks:—The word "Distinctly" must be understood in the language of the schedule to include not only all factories and large works, but also the mechanical trades, as blacksmithing, carpentering, wagoning, &c. The smallest shop should not be omitted, provided the production makes 1879 or more, including the case of goods. Estimates will take place in several of the productions establishments, large and small, within their several limits.

Columns 1, 2, and 4 will be filled in by the Census Worker. Columns 3, 5, and 6 will be filled in by the Factory Worker. Columns 2, 3, and 4 will be filled in by the Census Worker. Columns 2, 3, and 4 will be filled in by the Factory Worker. Columns 2, 3, and 4 will be filled in by the Census Worker.
The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz.: (1.) Brick and Stone Factories. (2.) Cheese and Butter Factories. (3.) Flouring and Grist Mills. (4.) Salt Works. (5.) Lumber Mills and Saw Mills. (6.) Brick Yards and Tile Works. (7.) Paper Mills. (8.) Coal Mines. (9.) Agricultural Implement Works. (10.) Quarries.

SCHEDULE 3.—MANUFACTURES. Products of Industry in , in the County of , State of , during the twelve months beginning June 1, 1879, and ending May 31, 1880, as enumerated by .

David L. Braden, Enumerator.
The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz:

1. Shot and Shell Factories.
2. Gunsmiths and Maker Factories.
3. Flouring and Grist Mills.
5. Lumber Mills and Saw Mills.
10. Quarries.

SCHEDULE 3.—MANUFACTURES.—Products of Industry in [Name], in the County of [Name], State of [State], during the twelve months beginning [Date], and ending [Date], as enumerated by age.

Remarks: The term "manufacturing industry" used in this schedule, includes not only all factories and large works, but also for mechanical trades, as dressmaking, coppersmithing, &c. The number of employees should not be included, except the personal labor of the manufacturers, including the work of apprentices.

References: The kind of business or the nature of the product should be described as explicitly as possible, e.g., Sewing machine, Cotton, Cotton, Furniture, Furniture, Machine Shop, Carpenter, Bricklayer, &c.

Columns 5, 8, and 9: If the number of steam engines used is less than one, an engine should be assumed to be used in the same ratio as the number of steam engines used. If the number of steam engines used is more than one, an engine should be assumed to be used in the same ratio as the number of steam engines used, and the number of hours worked by each engine should be added together.

Column 10: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 11: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 12: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 13: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 14: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 15: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 16: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 17: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 18: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 19: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 20: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 21: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 22: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 23: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 24: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 25: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 26: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 27: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 28: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 29: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 30: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 31: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 32: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 33: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 34: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 35: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 36: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 37: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 38: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 39: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 40: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 41: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 42: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 43: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 44: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Column 45: The number of hours worked by each engine should be added together. If the number of hours worked by each engine is less than one, a steam engine should be assumed to be used in the same ratio as the number of hours worked by each engine.

Remarks: The term "manufacturing industry" used in this schedule, includes not only all factories and large works, but also for mechanical trades, as dressmaking, coppersmithing, &c. The number of employees should not be included, except the personal labor of the manufacturers, including the work of apprentices.
The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz: 
(1.) Boot and Shoe Factories, 
(2.) Cheese and Butter Factories, 
(3.) Flouring and Milling Mills, 
(4.) Salt Works, 
(5.) Lumber Mills and Saw Mills, 
(6.) Brick Yards and Tile Works, 
(7.) Paper Mills, 
(8.) Coal Mines, 
(9.) Agricultural Implement Works, 
(10.) Quaries.

SCHEDULE 3.—MANUFACTURES.—Products of Industry in New Home, in the County of , State of , during the twelve months beginning June 1, 1879, and ending May 31, 1880, as enumerated by me.

**REMARKS.**—The term "Manufactures" may be understood to include not only all factories and shops, but also the mechanical trades, as blacksmithing, carpentry, &c. The smallest shop should not be omitted, provided the product thereof makes 80$ annually, including the cost of materials. Manufacturers will be asked to supply all of the product as far as can be done, with their several classes.

**DISCLAIMER.**—The value of the product, in the case of mills and factories producing for a distant market, assumes the wholesale price of the goods. In the case of small shops producing goods, or doing work, for the neighborhood only, the value of the product assumes the price charged at the shop.

**NOTES.**—Columns 5 and 6 are for shops in a very small way, and columns 7 and 8 are for shops in a very large way, and columns 9 and 10 are for shops in a medium way.

**DESCRIPTION.**—A detailed description of the product shall be given in the space provided.

**SIGNATURES.**—The enumerator shall sign his name at the bottom of the schedule, and the chief enumerator shall sign his name at the bottom of the report.
The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz: 

(1.) Boot and Shoe Factories. 
(2.) Cheese and Butter Factories. 
(3.) Lumbar Mills and Saw Mills. 
(4.) Flouring and Grain Mills. 
(5.) Brick Yards and Tile Works. 
(6.) Paper Mills. 
(7.) Coal Mines. 
(8.) Agricultural Implement Works. 
(9.) Quarries.

SCHEDULE 3.—MANUFACTURES.—Products of Industry in [Illegible], in the County of [Illegible], State of [Illegible], during the twelve months beginning June 1, 1879, and ending May 31, 1880, as enumerated by me.

<table>
<thead>
<tr>
<th>Name of Industry</th>
<th>Number of Establishments</th>
<th>Wages and Hours of Labor</th>
<th>Value in a Year</th>
<th>Power used or none</th>

</tbody>
</table>

Notes:—The term "Manufacturing Industry" must be understood, as inclusive all industries, to include not only all factories and large works, but also the mechanical duties, as bricklaying, carpentry, erecting, etc. The smallest shop should not be excluded, provided the products made are regularly sold. The quality of the product should be described as specifically as possible, (as: Woolen Mills, Cotton Mills, Flouring, Bricklaying, etc.).

Columns 2-10.—The columns should be filled in as nearly as possible. Where the number is 10 or less, it should be entered as nearest 10. In the case of 50 or more, it should be entered directly.

Columns 11 and 12.—The columns are not of great importance. Great care will be required in making the entries clear and distinct, especially in the case of small shops where bookkeepers are not kept.

1891.—The value of the product, in the case of small and medium-sized products, producing for a distant market, must be obtained from the price of the goods. In the case of small shops producing goods or doing work, for the neighboring only, the value of the product must be the price.
The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz:

(1.) Dock and Ship Factories.
(2.) Cheese and Butter Factories.
(3.) Lumber Mills and Saw Mills.
(4.) Brick Yards and Tile Works.
(5.) Paper Mills.
(6.) Coal Mines.
(7.) Agricultural Implement Works.
(8.) Quarries.

**SCHEDULE 3.—MANUFACTURES.**—Products of Industry in the County of , in the State of , during the twelve months beginning June 1, 1879, and ending May 31, 1880, as enumerated by me.

Post Office: **Assisted Hill.**

**Remarks:**
- The term "Products of Industry" must be understood, in its largest sense, to include not only all factories and shops, but also the mechanical trades, as blacksmithing, carpentering, etc. The smaller shops should not be omitted, although the products may be small in quantity.
- The products should be described as accurately as possible, thus: Lumber, saw mill, carpet, woolen, manufacture, etc.

**Column 1:** The number of names, the description, and the number of hands employed, etc. should be entered in each table in the order of the schedule, 1 to 9 inclusive, etc., in the order of the schedule, 10 to 95 inclusive, etc. In the case of the schedule, 1 to 9 inclusive, the number of hands employed, etc. should be entered in the schedule, 10 to 95 inclusive, etc.

**Column 2:** The cost of materials and labor should not be less than the value of the products, nor should the value of the products exceed the cost of materials.

**Column 3:** This column should contain the number of hands employed, the cost of materials, and the amount of goods produced, with the value of the materials used, and the value of the goods produced.

**Column 4:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 5:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 6:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 7:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 8:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 9:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 10:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 11:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 12:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 13:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 14:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 15:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.

**Column 16:** This column should contain the names of the manufacturer, the description of the manufacture, and the number of hands employed, the value of the products produced, and the value of the materials used.
**The following classes of Manufacturing Establishments will be reported on a SPECIAL MANUFACTURING SCHEDULE, and not on this Schedule, viz:**

1. Book and Print Factories.
2. Cheese and Butter Factories.
3. Flouring and Great Mills.
5. Lumber Mills and Saw Mills.
10. Quarries.

**SCHEDULE 3.—MANUFACTURES.** Products of Industry in the County of , in the State of , during the twelve months beginning June 1, 1879, and ending May 31, 1880, as enumerated by me.

**Post Office:** Dallas, Bates Co., Mo.

NOTES.—The work “Production Industry” must be understood, in its highest signification, to include not only the manufacture and larger works, but also the mechanical trades, as blacksmithing, carpentering, &c. The smaller shops should not be omitted. Where the product cannot be valued, the price per pound or per yard should be stated.

CRANES.—The kind of machines or engines should be stated, and the number of hours or days per week on which they were in operation.
